A news report

Read carefully

The scientist named the population, after their distinctive horn, Ovid's Unicorn. These four-horned, silver-white unicorns were previously unknown to science.

Now, after almost two centuries, the mystery of what sparked this odd phenomenon is finally solved.

Dr. Jorge Pérez, an evolutionary biologist from the University of La Paz, and several companions, were exploring the Andes Mountains when they found a small valley, with no other animals or humans.

Pérez noticed that the valley had what appeared to be a natural fountain, surrounded by two peaks of rock and silver snow.

Pérez and the others then ventured further into the valley. "By the time we reached the top of one peak, the water looked blue, with some crystals on top," said Pérez.

Pérez and his friends were astonished to see the unicorn herd. These creatures could be seen from the air without having to move too much to see them – they were so close they could touch their horns.

A news report

The prompt

In a shocking finding, scientist discovered a herd of unicorns living in a remote, previously unexplored valley, in the Andes Mountains. Even more surprising to the researchers was the fact that the unicorns spoke perfect English.

GPT-2

The good and the bad

- AI writing assistants
- More capable dialogue agents
- Unsupervised translation between languages
- Better speech recognition systems
- Generate misleading news articles
- Impersonate others online
- Automate the production of abusive or faked content to post on social media
- Automate the production of spam/phishing content

Source: <https://www.inkstonenews.com/tech/chinese-robot-copying-machine-causes-online-debate/article/3000875>

GPT-2

Grave concerns

- Due to concerns about large language models being used to generate deceptive, biased, or abusive language at scale, the researchers did not release the full dataset and code.
- They were not sure they were doing the right things, but they hoped the community should start to tackle this issue.
